

Please DO NOT allow Cellular Telephone use aboard commercial air flights. Flying is already difficult enough with so many people being crammed into such a small space for long periods of time. If everyone can use their cell phones there will be constant chatter that's impossible to get away from. Sleeping or reading without interruption is already difficult -- with people on cell phones constantly it would be almost impossible. Can we please maintain one of the few places where we're not subjected to other people's conversations with no way out? Thank you for your support.
